

Case Study: Enigma Design

installed by LVP Renewables

Overview

A leading company in the bespoke furniture and interior solutions industry, sought to enhance its sustainability efforts and reduce operational costs through solar panels. With the support of the government-backed SCBI loan scheme and an SEAI grant, they successfully implemented a cost-effective, long-term energy solution that will significantly reduce the electrical costs of the business whilst improving their carbon footprint.

Date of Installation: 20/01/2025

Installation Size: 22KW (50 Panels)

Year 1 projections: 22,290 kWh's

Payback period: 4 ½ years

Why LVP Renewables?

- Over 15 years in the industry!
- Clear, transparent paybacks delivered
- We handle the paperwork

LVP Renewables

Proposal

Under the final proposal, they were assured key financial and operational benefits, including:

- **SCBI Loan Terms:** A government backed loan that can be repaid over 7-10 years with preferential APR's.
- **Projected Savings:** Estimated annual energy savings of just under €6,000.
- **SEAI Grant Support:** A government-backed grant that was reinvested into the business for further development.
- **No Capital Outlay:** The financial plan allowed Enigma Design to implement these upgrades without requiring any upfront investment.

Deliverables

By leveraging these financial supports, they successfully upgraded its energy systems without disrupting cash flow.

- ✓ Company pays no money upfront.
- ✓ Solar panels to be self financing.
- ✓ Installation complete within 2 working days.
- ✓ Zero downtime for the business!

Conclusion

This case study highlights the strategic advantage of government-backed financing options for businesses looking to enhance their sustainability without incurring significant upfront costs. Their experience serves as an exemplary model of how businesses can leverage financial incentives to achieve long-term economic and environmental benefits.
